

PROBLEM

K9 action data:

labels are scarce and costly

annotation is the bottleneck:

full supervision does not

transfer across domains

APPROACH

Physics Φ

frozen

self-supervised

dynamics +

proposals

Semantic Ω

revisable

$\mathcal{Y} \rightarrow \mathcal{Y}'$:

only Ω retrains

anchor pseudo-labels

RESULT

budget retention

100%

NTU60

90.7%

NTU120

88.9%

canine

28.9%

own full-budget top-1 kept at 10% labels;
canine: 9.8 vs 11.1% chance at 13% budget
